OPENWAY WEB VIDEO CONFERENCING SYSTEM

On-premise / Cloud Solution

Supports real-time sharing of audio, video, slides (with whiteboard controls), chat, and the screen. Instructors can engage remote users with polling, emojis, multi-user whiteboard, and breakout rooms.

Presenters can record and playback content for later sharing with others.

CHAT
Send private and public messages

WEBCAMS
Hold visual meetings

AUDIO
Communicate using high quality audio

POLLING
Pole your users any time

EMOJIS
Express yourself

BREAKOUT ROOMS
Group users into breakout rooms for team collaboration

SCREEN SHARING
Share your screen
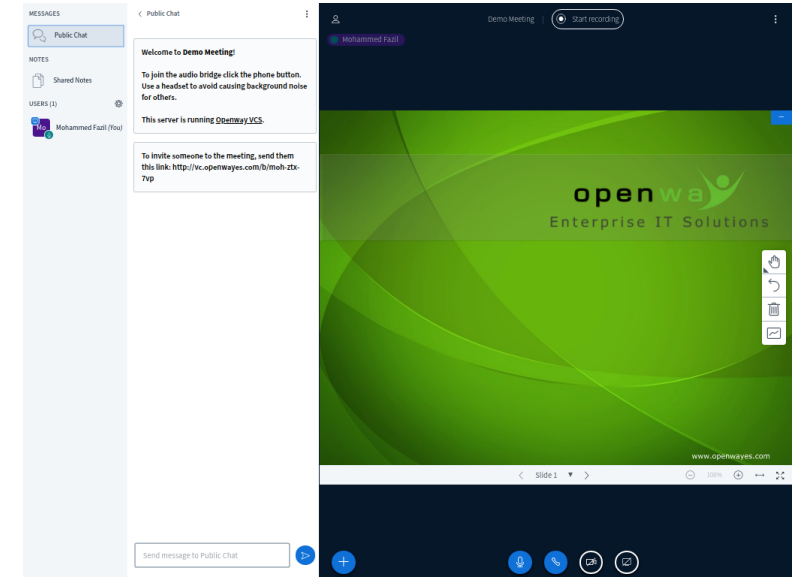

MULTI-USER WHITEBOARD
Draw together

Openway WVC Overview

Openway Web Video Conference is an HTML5-based web application. Unlike many commercial web conferencing systems that require you to install software, Openway WVC runs within your web browser. You click a link (such as in Greenlight), your browser runs Openway WVC and prompts you to join the audio bridge.

There is no plugin to download, no software to install. Openway WVC provides high-quality audio, video, and screen sharing using the browser's built-in support for web real-time communication (WebRTC) libraries.

WebRTC is a standard supported by all major browsers, including Chrome, FireFox, Safari, and Safari Mobile. For best results on desktop and laptops, we recommend Chrome or Firefox. For Chromebooks, we recommend the built-in Chrome browser.

Mobile Support

Openway WVC has a "mobile first" design. We designed the user interface (UI) to first run on a mobile device. Like the desktop, there is no mobile app to download or install. Openway WVC runs within your mobile browser.

Openway WVC runs on iOS version 12.2+ and Android version 6.0+. To join a session, you click a link within the browser, and Openway WVC will run within Safari Mobile (iOS) or Google Chrome (Android).

How to Use?

- ✔ Sign in to vc.openwayes.com (Contact Openway Sales for Admin Account)
- ✔ Create a Room
- ✔ Share invite link with users
